TimescaleDB是基于PostgreSQL数据库打造的一款时序数据库，插件化的形式

```
docker run -d --name timescaledb -p 5432:5432 -e POSTGRES_PASSWORD=password
timescale/timescaledb-ha:pg14-latest
```

检查容器中是否已安装TimescaleDB扩展

```
/ # su postgres
/ $ psql
psql (14.5)
Type "help" for help.

postgres=# \dx
                            List of installed extensions
    Name     | Version |   Schema   |                     Description
-------------+---------+------------+------------------------------------------------------------
 plpgsql     | 1.0     | pg_catalog | PL/pgSQL procedural language
 timescaledb | 2.8.1  | public     | Enables scalable inserts and complex queries for time-series data
(2 rows)

postgres=#
```
